

# Fungus WACKER<sup>TM</sup> 5000

*"The Natural Way Back To Health"*

Patented natural product developed by noted naturopath and master herbalist, Dona Garofano, CNC, ND, M/H.

**For all your external fungal needs...eczema, psoriasis, skin rashes - some forms of eczema, psoriasis and various skin rashes are fungal related. If this is the case, results may be seen with Funguswacker5000 products. Wash area, apply cream, and cover completely as product stains. Powder can be used in the daytime for convenience.**

## INSTRUCTIONS FOR EXTERNAL USE:

### FUNGUSWACKER5000 POWDER

FOR LARGE AREAS AND DAYTIME USE -

Soak and scrub infected areas with warm soapy or salt water. (Some people add bleach). Rinse and pat dry thoroughly. If using the companion cream, some cream may remain. Sprinkle and rub powder over entire infected area. Leave on throughout the day.

For conditions on skin surface of body, simply sprinkle over area after washing several times a day.

**SUGGESTIONS:** May apply powder in shoe, sock, or stocking to help keep foot dry and avoid new fungal growth. See above instructions for treating shoes prior to applying powder.

**FOR BEST RESULTS:** The use of both Funguswacker5000 cream and powder as companions during the day and night seems to provide the most rapid results.

**NOTE:** As tissue heals, some itching may occur. If itching persists for more than 5 days, discontinue use. If you have an allergic reaction to tea tree oil, please request our regular cream instead of the extra strength.

**COMMENTS:** Our formulas contain herbs and oils known to reduce inflammations, aid in fungal, viral and infection conditions of the skin, promote healing and aid in reducing scarring.

For athlete's feet and nail bed fungus, order the extra strength cream.

For other skin conditions, request our regular formula, as tea tree oil can sometimes aggravate the condition and produce itching.

#### ATHLETE'S FEET & SCALING SKIN ON FOOT -

Soak foot same as for nail fungus and scrub away dead skin tissue. Rub in thin layer of Funguswacker5000 cream over infected areas and cover entire foot with plastic wrap and a sock. This assures that the cream soaks into the tissue and does not stain clothing. Leave on entire night. In morning, wash foot. If some cream remains, leave it on. Pat foot dry and apply Funguswacker5000 powder to foot or into sock. At night repeat process.

### FUNGUSWACKER5000 CREAM

FOR NAIL FUNGUS -

Soak foot for approximately 10 minutes in warm soapy or salt water to soften tissue. (Some people add bleach to the water). Rinse and dry thoroughly. Clip back and file down nail. Remove any dead tissue under and around nail. Gently lift nail bed with cuticle pusher or towel. Stir cream and apply small amount into nail bed, around and under nail.

**NOTE:** This cream contains herbs and oils which may stain clothing so use caution when applying. Cream is naturally gritty in nature due to root herbs.

Cover with bandage or gauze and tape. (Some sensitive skin may react to continual bandage application, so gauze and tape or hyper-allergenic bandages can be used.)

Allow approximately 90 days for normal nail growth to start to occur at nail bed if directions are followed daily. Quicker results have been seen with minor infections.

**PLEASE NOTE:** Age, severity of condition and consistency of application all contribute to time of healing process. Fungus is very resilient, so be patient. Continue to use once or twice a week after condition returns to normal as fungal spores may still be remaining in the surrounding skin tissue and could cause a reoccurrence.

As healing occurs, nail may start to separate from skin. This creates more exposure to fungus and is positive. Simply cut away old nail and continue applying cream.

While treating the foot, it is helpful to treat the inside surfaces of the footwear with a bleach and water solution to kill fungal spores which may be hiding in the pores of your leather shoes and sneakers. This helps to prevent recontamination as the healing process takes place. (A one part water to one part bleach solution is usually strong enough). By using a white cloth, apply solution to the inside surfaces of footwear and let air dry. When dry, apply some Funguswacker5000 powder to the inside of the shoe. This application need not be done more than once every week or two.
